## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-23, 33-51 drawn to lightning detection system (apparatus) and method comprising a lightning discharge source classified in class 324, subclass 72.
- II. Claims 24-32, 52-60, drawn to lightning detection system (apparatus) and method comprising plurality of lightning discharge sources, classified in class 702, subclass 4.

### ***Distinctness***

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I does not require a discharge correlation component. The

Art Unit: 2858

subcombination has separate utility such as for determining time or location of lightning discharge.

***Why Restriction is Proper***

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to attorney on 5-27-03 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

***Contact Information***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dr. Anjan K. Deb whose telephone number is (703) 308-2941.
